

Sensi Chew Energy

Ginseng-infused, Gluten-free, Low Calorie

Daytime

Anti-Fatigue

TESTIMONIAL

"The reason I'm now a Sensi Chew believer is because it's so convenient, I LOVE that it's a trusted measured dose. I never have to worry about taking too much and one quarter of a pack is my perfect dose. I travel for business and can medicate without fear, without hiding. I can even medicate on a plane! I know my dose and know what to expect. I've tried some of the cookies and brownies and chocolates and nothing is as effective and easy, and reliable as a Sensi Chew."

Ginseng.	Potassium 10mg	Protein 0g

*The % of Daily Value (DV) is how much a nutrient in a serving of food contributes to a daily diet of 2000 calories a day.

Sensi Chew Energy is for patients with pain, who want to medicate and be alert, and have a THC tolerance. It contains a total 90MG of concentrated cannabinoid extract and 10MG per dose of natural ginseng suspended in a chewy chocolate caramel. The cannabinoid profile is primarily THC with small amounts of CBD, CBC, CBN, CBG, THCV, and other whole plant cannabinoids and terpenoids. Those who are new to or have a low tolerance with medicated edibles should proceed slowly.

HOW IT WORKS

The cannabis medicine enters the blood stream first through oral membranes in the mouth, then absorbed through the gastrointestinal track and finally processed through the liver. The body's Endocannabinoid System (ECS) primary receptors CB1 and CB2 are effected by the incoming cannabinoids and serve distinct functions in managing pain, health and well-being. CB1 receptors are primarily found in the brain and central nervous system. CB2 receptors are mostly found in the peripheral organs and cells associated with the immune system. All of the cannabinoids found in cannabis work together to provide synergistic advantages with cells from both CB1 and CB2 receptors. In addition to cannabinoids and common to all plants used for compounding remedies and medicine, cannabis plants also contain terpenes and terpenoids that give plants their smell and taste and which provide a broad spectrum of medical, nutritional, and health benefits.

HOW TO DOSE

Medicated edible dosing is unique to each patient. To achieve best results experimentation and testing is needed to find the most effective approach. Several factors will effect how it works, such as dose consumed, age of patient, with food or on an empty stomach, time of day, with other drugs, and the experience of the patient with other cannabis therapy. Patients should keep notes when they begin until the desired effect is determined.

Sensi Chew Energy comes in 10-9MG doses. Try ½ to 1 dose (4-9MG) or less to see how your body responds. Each dose contains 10MG of natural ginseng, the equivalent to 1 strong cup of coffee. Wait at least 90 minutes before consuming more. This is very potent and caution should be used. Keep out of reach of children. Chew slowly and allow the caramel to melt in your mouth for faster onset and absorption through the oral membranes.

TESTIMONIAL

"I have been using Sensi Chew Energy for the past 5 months since I got my card and I absolutely love the effects it gives me for daytime! I can get through my day, be it at work (very discreet) or during weekends with friends and family with no sciatic or back pain, so I can enjoy my life instead of missing out on it. I had been on and off of pain pills for a good 6 years and the pills did not always work, was taking higher doses and STILL not helping (also super dangerous), the constipation, and of course the withdrawals. I have to say that Sensi Chew Energy helped me with my withdrawal symptoms so well, I have stopped using pain pills, and haven't gone back. I'm so thankful!!!!"

AJ, Santa Cruz CA

HOW TO DOSE *continued...*

The effects should begin between 30min to 90min after consumption, with peak effects at 90min to 2 hours, and lasting for up to 4 to 8 hours. Each patient's metabolism is different and the onset and duration will vary. Patients with a heart condition should avoid this product due to the infused caffeine.

PRIMARY CANNABINOIDS IN THIS PRODUCT

THC is a primary psychoactive cannabinoid. Therapeutic effects include reduction of nausea, stimulation of appetite, reduction of pain. THC may cause dizziness and disorientation.

CBD is a non-psychoactive cannabinoid. Therapeutic effects include reduction of pain and drowsiness. CBD may positively effect receptor binding and metabolism of THC.

CBC is a non-psychoactive cannabinoid. Therapeutic effects include anti-inflammatory, analgesic, anti-depressant, antibiotic, antifungal.

CBN is a by-product of THC. Therapeutic effects include anticonvulsant, anti-inflammatory, stimulate bone formation, reduce keratinocyte growth.

CBG is a non-psychoactive cannabinoid. Therapeutic effects include analgesic and anti-erythemic, antifungal, anti-hypertensive, inhibits psoriasis, antibiotic, anti-depressant, and has shown sign of anti-proliferative effects on some cancer cells.

THCV is a mild psychoactive cannabinoid. Therapeutic effects include reduction of appetite, weight loss, decreased body fat, anticonvulsant, anti-inflammatory.
