

Sensi Chew Amore Aphrodisiac 50MG

Tongkat Ali-infused, Gluten-free, Low Calorie

Anytime

Sensi Chew Amore 50MG is for patients with pain, who want to increase sexual desire and endurance, and have THC tolerance. It contains a total 50MG of concentrated cannabinoid extract with 80MG per dose of Tongkat Ali, a natural aphrodisiac. The cannabinoid profile is primarily THC with small amounts of CBD, CBC, CBN, CBG, THCV, and other whole plant cannabinoids and terpenoids. Those who are new to or have a low tolerance with medicated edibles should proceed slowly.

TESTIMONIAL

“My husband and I tried Amore recently and enjoyed the affects. Definitely increased our mood and endurance.”

LS, San Ramon CA

HOW IT WORKS

The cannabis medicine enters the blood stream first through oral membranes in the mouth, then absorbed through the gastrointestinal track and finally processed through the liver. The body’s Endocannabinoid System (ECS) primary receptors CB1 and CB2 are effected by the incoming cannabinoids and serve distinct functions in managing pain, health and well-being. CB1 receptors are primarily found in the brain and central nervous system. CB2 receptors are mostly found in the peripheral organs and cells associated with the immune system. All of the cannabinoids found in cannabis work together to provide synergistic advantages with cells from both CB1 and CB2 receptors. In addition to cannabinoids and common to all plants used for compounding remedies and medicine, cannabis plants also contain terpenes and terpenoids that give plants their smell and taste and which provide a broad spectrum of medical, nutritional, and health benefits.

Tongkat Ali is a natural aphrodisiac that comes from Indonesia and Thailand. Similar to ginseng it comes from a root and has been used throughout Asia. It increases the body’s production of testosterone. For men it increases blood flow, muscle mass and endurance. For women it increases blood flow, endurance, bone mass, and enhances mood.

HOW TO DOSE

Medicated edible dosing is unique to each patient. To achieve best results experimentation and testing is needed to find the most effective approach. Several factors will effect how it works, such as dose consumed, age of patient, with food or on an empty stomach, time of day, with other drugs, and the experience of the patient with other cannabis therapy. Patients should keep notes when they begin until the desired effect is determined.

HOW TO DOSE *continued...*

Sensi Chew Amore 50MG comes in 2-25MG doses. Try 1/2 dose (12-14MG) to see how your body responds. Wait at least 90 minutes before consuming more.

This is very potent and caution should be used. Keep out of reach of children. Chew slowly and thoroughly to allow for faster onset and absorption through the oral membranes.

The effects should begin between 30min to 90min after consumption, with peak effects at 90min to 2 hours, and lasting for up to 4 to 8 hours. Each patient's metabolism is different and the onset and duration will vary. Patients who are taking heart medication should avoid this product. Tongkat Ali effects are most effective when cycled, using it 3-4 days in a row followed by 3-4 days without use.

PRIMARY CANNABINOIDS IN THIS PRODUCT

THC is a primary psychoactive cannabinoid. Therapeutic effects include reduction of nausea, stimulation of appetite, reduction of pain. THC may cause dizziness and disorientation.

CBD is a non-psychoactive cannabinoid. Therapeutic effects include reduction of pain and drowsiness. CBD may positively effect receptor binding and metabolism of THC.

CBC is a non-psychoactive cannabinoid. Therapeutic effects include anti-inflammatory, analgesic, anti-depressant, antibiotic, antifungal.

CBN is a by-product of THC. Therapeutic effects include anticonvulsant, anti-inflammatory, stimulate bone formation, reduce keratinocyte growth.

CBG is a non-psychoactive cannabinoid. Therapeutic effects include analgesic and anti-erythemic, antifungal, anti-hypertensive, inhibits psoriasis, antibiotic, anti-depressant, and has shown sign of anti-proliferative effects on some cancer cells.

THCV is a mild psychoactive cannabinoid. Therapeutic effects include reduction of appetite, weight loss, decreased body fat, anticonvulsant, anti-inflammatory.
